Patient: John Doe

Age: 34

Report Date: 2026-10-20

X-Ray Report – Left Distal Radius

Clinical History: Fall while playing recreational football. Findings: Non-displaced distal radius fracture of the left wrist. No intra-articular extension identified. Mild surrounding soft tissue swelling. No evidence of dislocation. Impression: Stable, non-displaced distal radius fracture. Recommend short-arm cast for 6 weeks, orthopaedic follow-up, repeat imaging in 2–3 weeks, and avoid weight-bearing with the affected wrist.
